

VU MANH TIEN

JAVA BACKEND DEVELOPER INTERN

vutien31279@gmail.com | github.com/tienhoclaptrinh2005

TECHNICAL SKILLS

Languages: Java 21, SQL, TypeScript

Java Core and Design: OOP, Collections, Stream API, Optional, Records, exception handling, layered architecture and interface-driven services

Backend: Spring Boot 3.5, Spring MVC, Spring Security, Spring Data JPA/Hibernate, Bean Validation, MapStruct, Lombok

API and Security: REST APIs, JWT access and refresh tokens, Google Sign-In, RBAC, ownership authorization, OpenAPI/Swagger

Data and Reliability: PostgreSQL, Redis, database transactions, idempotency, optimistic and pessimistic locking, scheduled jobs with ShedLock

Integrations: SePay/VietQR Webhooks, Cloudflare R2 through the S3-compatible API

Testing and Tools: JUnit 5, Mockito, Maven Wrapper, Git, GitHub Actions CI

Supporting Frontend: Next.js 16, React 19, Axios, Zustand

PROJECTS

CommerceHub | Digital Product Marketplace

Java Backend Developer | Aug 2026 - Sep 2026 | MVP and Release Candidate | Source: [Backend](#) | [Frontend](#)

Java 21, OOP, Spring Boot, Spring Security, JPA/Hibernate, PostgreSQL, Redis, JWT, MapStruct, ShedLock, SePay, Cloudflare R2

- Applied Java Core and OOP principles through modular controller-service-repository layers, interface-driven services, DTO/entity separation, Records, Optional, Stream API and MapStruct mapping.
- Designed versioned REST APIs for a digital marketplace with BUYER, SELLER and ADMIN roles, covering authentication, shops, product variants, inventory, carts, orders, wallets, fees, withdrawals and disputes.
- Secured APIs with Spring Security, JWT access and refresh tokens, Google Sign-In, RBAC and resource-ownership checks; standardized validation, response envelopes, pagination and global error handling.
- Integrated SePay/VietQR deposits using signed webhooks, 15-minute transaction codes and idempotent duplicate processing, then recorded balance changes in an auditable wallet transaction ledger.
- Protected payment and inventory workflows with transactional service boundaries and optimistic/pessimistic locking, preventing duplicate digital-asset delivery and inconsistent wallet or stock updates.
- Implemented INSTANT and PRE_ORDER lifecycles, refunds, seller withdrawals, T+7 fund holding, warranty/dispute resolution and automated 24-hour deadlines through scheduled jobs protected by ShedLock.
- Built Cloudflare R2 upload services for product covers and user avatars with WebP conversion, MIME, file-size and dimension validation, UUID object keys, cache headers and Redis-backed rate limiting.
- Prepared environment-based configuration for PostgreSQL, Redis, CORS and Cloudflare R2; documented the API contract with OpenAPI/Swagger and added GitHub Actions CI using Java 21 and PostgreSQL 16, maintaining 120 passing backend tests across 42 suites.
